

DATABASE

Design & Implementation

COMP-11109

MSc - Information Technology

**School of Computing, Engineering and Physical Sciences
London Campus**

UWS
London

COURSEWORK

Aim

Design & Implementation

**of a Relational Database
System using
Microsoft Access**

DATABASE
Design & Implementation
COMP-11109

TASK:

APPOINTMENT SCHEDULING

**for a Service-based
Small & Medium Enterprise
(SME)**

Requirement Analysis - 1

FUNCTIONAL

- 1. This is a family-owned business, and**
- 2. They used to manage all services on pen and paper,**
- 3. Yet, it has grown to the point where this method has become unfeasible and**
- 4. Therefore, looking to professionalise the management of the operation.**

Requirement Analysis - 2

DATABASE

You have been contracted to design and develop a database system for the small SME that provides services to local end consumers.

The SME provides small home repairs like:

- Indoor painting,**
- Joinery,**
- Hand tools & etc**

DATA - Requirement Analysis – 3

ENTITIES

These are:

- **CLIENT**
- **EMPLOYEE**
- **SERVICE CATALOGUE**
- **INVOICE**

CLIENT:

The system needs to store client details:

- **CRUD operations on client details must be allowed through forms**
- **Envisioned schema for this entity is:**
 - **ClientID,**
 - **ClientName,**
 - **ClientAddress,**
 - **ClientEmail,**
 - **ClientMobile**

EMPLOYEE:

- **CRUD operations on client details must be allowed through forms**
- **Envisioned schema for this entity includes:**
 - **EmployeeID,**
 - **EmployeePayrollNumber,**
 - **EmployeeName,**
 - **EmployeeMobile**
- **However, a solution (DS1) is needed to**
 - **design a way to connect the**
 - **Employee Entity with the Service Catalogue**
 - **(DS1 = ClientAppointments)**

SERVICE CATALOGUE:

The System must maintain a catalogue of service offered

(such as: - Indoor Painting, Exterior Painting, Joinery, “Etc”)

- **All services are offered at a base**
 - **cost-per-hour rate**
 - **plus expenses.**
- **Envisioned schema for this entity is:**
 - **ServiceID,**
 - **ServiceName,**
 - **ServiceDescription,**
 - **ServiceHourlyRate**

SERVICE CATALOGUE:

At this point:

- **A solution (DS2) is needed to:**
 - **Design a way to connect ENTITIES**
 - **Service with the CustomerCataloge
(i.e ServicesProvided):**

Which conveys services performed to:

- **Each customer**
- **On a specific date,**
- **Reporting the expenses &**
- **3NF compliant**

INVOICE

- An invoice is an Entity that provides flexibility to DS2.
- This allows the business to offer discounts and
- be more competitive in larger jobs.

Envisioned schema for this entity is

- InvoiceID,
- InvoiceNumber,
- InvoiceCost,
- InvoiceDiscount,
- InvoiceTotal

DATABASE
Design & Implementation
COMP-11109

A solution (**DS3**) is needed to

- Design a way to connect ENTITIES

Invoice with the ClientAppointments (**DS1**)

- That is 3NF compliant and
- Conveys which appointments have been grouped together
- to produce an Invoice.

Other Requirements are:

2. **INVOICE**

- **An invoice is an Entity that provides flexibility to DS2.**
- **This allows the business to offer discounts and**
- **be more competitive in larger jobs.**
- **Envisioned schema for this entity is**
 - **InvoiceID,**
 - **InvoiceNumber,**
 - **InvoiceCost,**
 - **InvoiceDiscount,**
 - **InvoiceTotal**

3. A solution (**DS3**) is needed to

- **Design a way to connect the**
- **Invoice Entity with the ClientAppointments (DS1)**
- **That is 3NF compliant and**
- **Conveys which appointments have been grouped together**
- **to produce an Invoice.**

Conceptualization

You have been contracted to:

- a. Design and deliver a Database system**
- b. Using Microsoft Access.**
- c. Meet the aim of the stakeholders; which are:**

To create a robust DBMS that efficiently manages:

- a. Core entities,**
- b. Services,**
- c. Customers,**
- d. Orders, and Payments,**

to facilitate seamless transactions and enhance the overall user experience.

**NB: - All services are offered at a base
cost-per-hour rate plus expenses.**

PART – 4

RELATIONSHIPS

**As per the description above,
the following Entity Relationships
have been identified, (see DS1, DS2 and DS3)
which are:**

- a. ClientAppointments,**
- b. ServicesProvided**
- c. InvoiceRows**

ClientAppointments

RELATIONSHIP

DATABASE
Design & Implementation
COMP-11109

**A one-to-many relationship
between Service and Client.**

Here –

- **Client can have multiple appointments,**
- **but each appointment is associated with a single client.**
- **This relationship also details the EmployeeID that provides the service &**
- **It is with an integrity constrain that the Employee is able to provide the service.**

4B - Other Relationships

DATABASE
Design & Implementation
COMP-11109

ServicesProvided

**A many-to-many relationship
between Service and Employee.**

**But an employee can
provide multiple services.**

InvoiceRows,

- **a one-to-many relationship**
- **This is between Invoice &
ClientAppointments.**

GENERAL PROCEDURE

Using the Entity-Relationship (ER)

- You are required to:

DESIGN & IMPLEMENT

this database system through:

- a. Data requirements analysis,**
- b. Conceptual design logical design**
- c. Implement and testing using MS Access.**

The above specification lists the bare minimum needs.

However, for everything you do to develop this;

- You are required to document &**
- Present a formative-based academic report.**

DATABASE
Design & Implementation
COMP-11109

DATABASE
Design & Implementation
COMP-11109

Task - 1

CONCEPTUALIZATION

Using the concepts of the
Entity-Relationship (ER) data modelling.

Create a

14%

Conceptual Schema

for the above database system

Task – 1B - PROCEDURE

- a. Show the following design steps:
- Draw partial ER diagrams
 - Showing each entity and all its attributes individually;
- b. Complete the ER diagram by using the notation shown in the example of the Student relation given below:
- c. Student
- bannerID = [PK],
 - fName,
 - lName,
 - address,
 - gender,
 - NIN,
 - compID,
 - DOB,
 - ProgrammeTitle
1. Primary key: = bannerID
 2. Foreign key: = ProgrammeTitle
references Programme(pTitle)
 3. Alternate key: = NIN

TASK-1C CONSIDERATIONS

Only primary key attributes should be included in the simplified ER diagram

Your ER diagram must make use of the building blocks of ER diagrams; which including

- **Primary key**
- **Alternate keys, (simple or composite),**
 - **Composite attribute,**
 - **Multi-valued attribute,**
 - **Attribute of a relationship,**
 - **Recursive relationship,**
 - **1:1 relationship,**
 - **1:M relationship, and**
 - **M:N relationship, among others.**

DATABASE
Design & Implementation
COMP-11109

Task - 2

IMPLEMENTATION

Process

14%

Create the TABLES & RELATIONSHIPS

NB:

- All the elements shown above in blue in your relational schema must be properly implemented.
- Enforce the referential integrity including
- update rules on each of the relationships btw tables
- Moreover, set field properties and in particular:

Task - 3

POPULATE

the Tables with Data

2%

- a. **Populate the tables with meaningful data.**
- b. **Enter sufficient data that reflect:**
 - **Relationships**
 - **Structural constraints**
 - **Participation constraints and**
 - **Cardinality ratio specified with 'min..max') &**
 - **Test with the queries in Task 4**

DATABASE
Design & Implementation
COMP-11109

Task - 4

QUERY

the Database

9%

Using **SQL** script

- Write at least 10 queries and
- Run them in your database,
- Thereafter –
- Show that your SQL lines work
(using screen capture)

DATABASE
Design & Implementation
COMP-11109

Task - 5

APPLICATION of the Database

7%

- a. Develop & implement a MS-Access based application**
- **that will allow the database users**
 - **to access and retrieve data from the database.**

In your report

- **The MS-Access based application should show or have:**
 - **A 'user friendly' graphical interface.**
 - **Allow the users to perform the following:**
 - Run Use Cases for the System;**
 - View data in Tables Employee and**
 - Clients from the datasheet view**

Task - 6

CRITICAL EVALUATION

10%

Submit a critical assessment of your work you learned to design and implement a relational database.

The value of this coursework in terms of:

- **Understanding**
- **Appreciating**
- **The techniques &**
- **Methods (or otherwise)**

DATABASE
Design & Implementation
COMP-11109

Lastly - things that must be included here -

from each member of the group are:

- A brief statement of 'my contributions'**
- Must not be longer than one page.**

DATABASE
Design & Implementation
COMP-11109

Task-7

COURSEWORK

Submission

Guidelines

**Note: - your coursework report should be typed using
Microsoft Word and nothing else
(e.g, PDF or any other software)**

The report should have:

- i. A cover sheet with the names and banner id of all students involved in the submission.**
 - ii. Heading for each task.**
 - iii. Explain your reasoning and**
 - iv. Provide adequate evidence of the work
(through screenshots, SQL statements, as necessary for each task).**
- ONLY the TEAM LEAD can upload the report to the Aula.**
 - Keep your database safe until you have received the official marks of the term, as you can be asked to demonstrate your database.**
 - Zipped/ compressed your files at the submission point.**

PRIVACY & SECURITY

The design presented above has no considered data privacy and security requirements.

You are requested to produce a one-page critique of the issues that can potentially become incidents.

You should include:

- a. An Identification of Sensitive data**
- b. Data protection measures that you would add to design**
- c. GDPR compliance.**
- d. Reflect on data minimization,**
- e. Purpose limitation,**
- f. Storage limitation &**
- g. Data subject rights (e.g., right to access, rectify, or erase personal data).**
- h. Provide recommendations on how the system can adhere to these principles and ensure the lawful processing of personal data.**

DATABASE

Design & Implementation

COMP-11109

COURSEWORK

Plagiarism

**Plagiarism is a serious offense
in academia.**

**All submissions will be checked
for plagiarism.**

**Students should submit their
own work,**

**As copied, or downloaded work
will lead to zero marks.**
